

## Screen 1

Add a video with the instructions

## Screen 2

API:

- Input
- Check.

## Screen 3

- User inputs:
  - A vague text idea
  - An optional image.
- User can scroll down per each website or they can just jump to the end to follow the basic prompt.

## Screen 4

The user can do one of two actions:

- Approve the script
- Ask to re-do of script

[JSON to Markdown for each panel]

## Screen 5

The user can do one of two actions:

- Approve the character designs
- Ask to re-do of script

## Screen 6

The final preview of the storyboards.

Warnings:

- It is currently not possible to perfectly control what AI image generators add to your prompts.
- It is possible that you will face a "translation dilemma". There may be too subtle nuances described for the panel to fit in a single panel.
- Rendering an additional panel to consider this is not economic. So it is left as described.
